We can use this site https://sqliteonline.com/ for creating our database. SQLite Browser is in Kali Linux.

Example 1:

This is an example of good DNSSEC, www.novinky.cz (the Czech Republic):
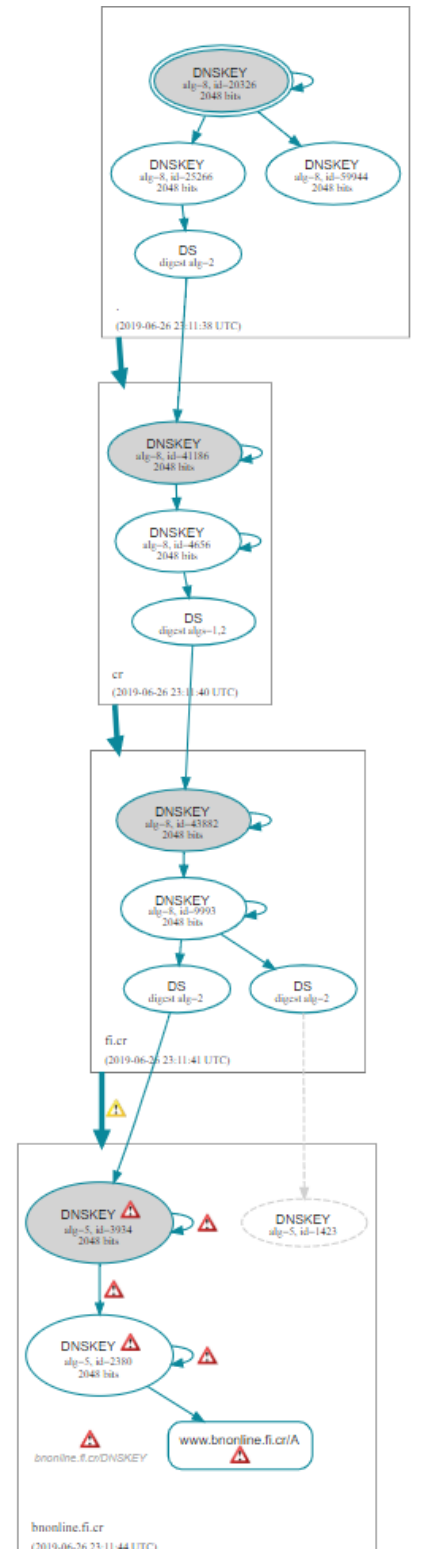

Example 2:

This is an example of good DNSSEC, but website www.kijiji.ca (Canada) does not use DNSSEC:
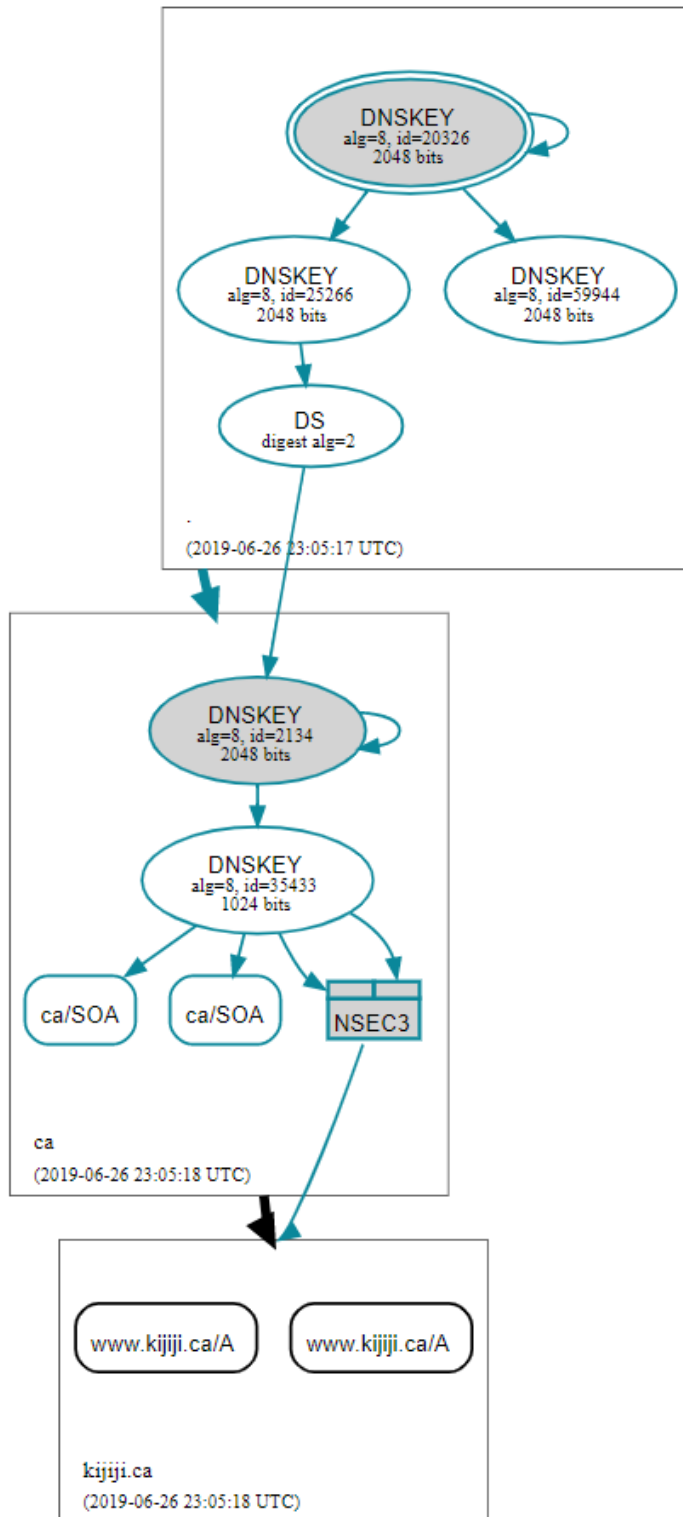

Example 3:

This is an example of good DNSSEC, but website www.bnonline.fi.cr (Costa Rica) excepts many errors. Therefore command 'dig +trace' returns False:
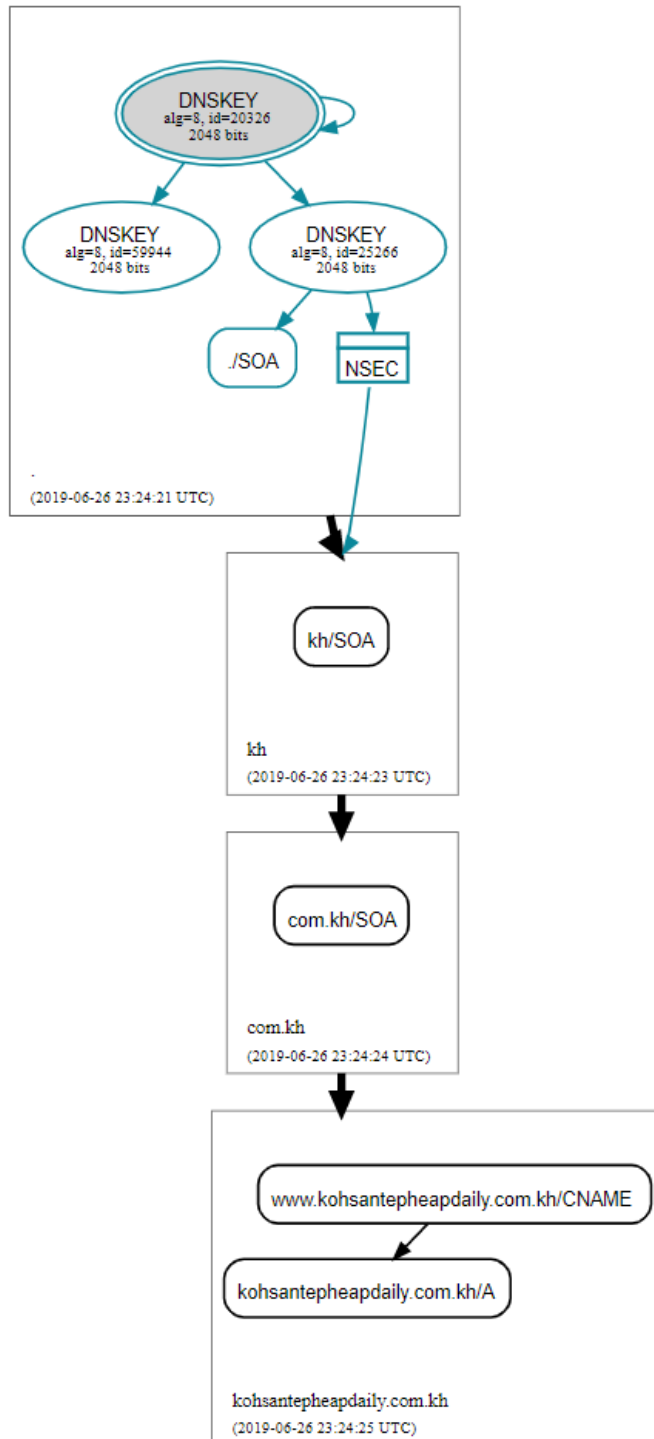

Example 4:

This is an example of the Internet country top-level domain does not use DNSSEC, www.emploi.cg (the Republic of the Congo):
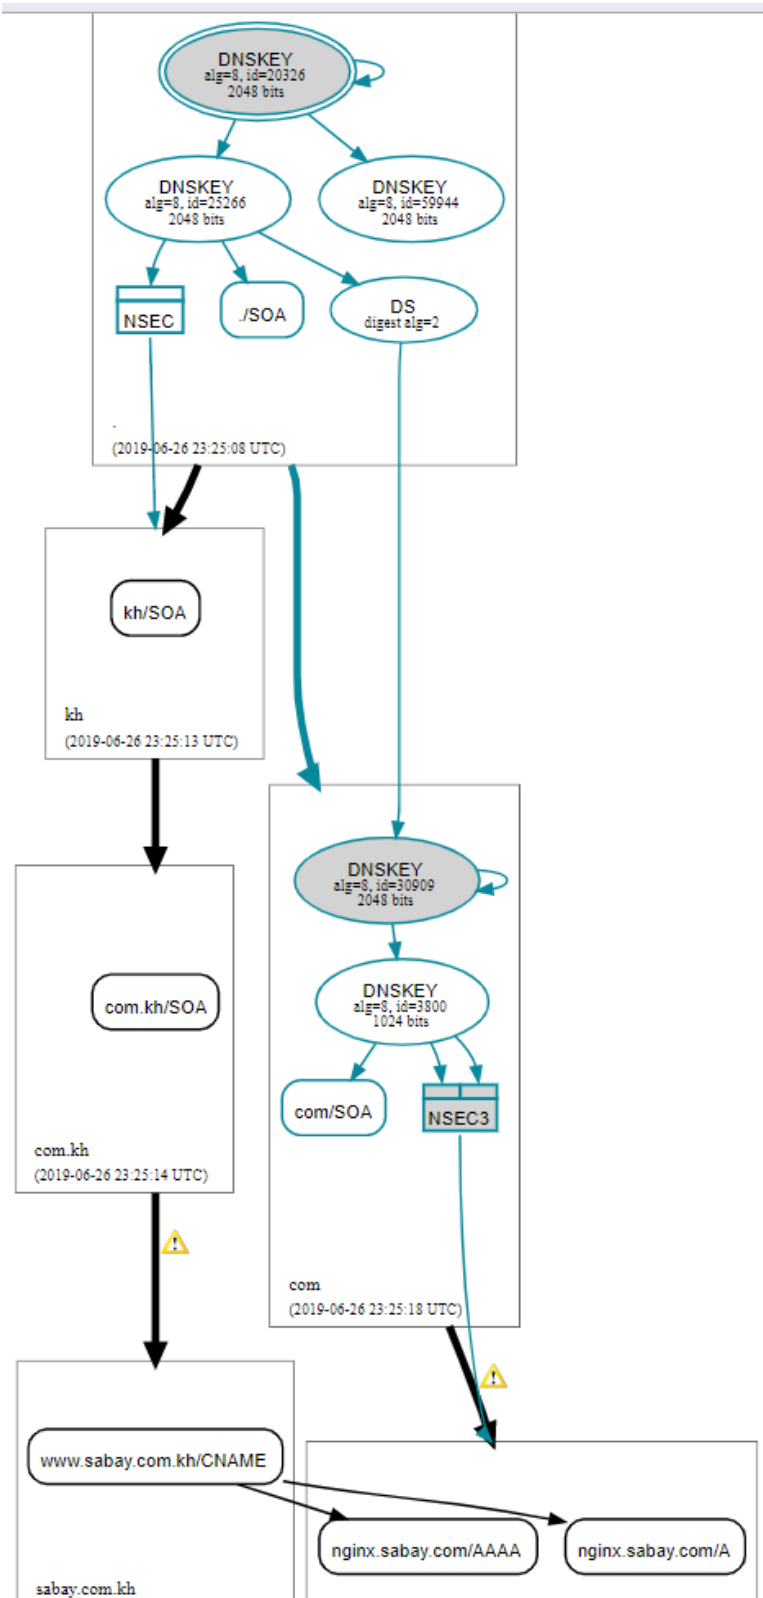

Example 5:

This is an example of equal the Internet country top-level domains, but trees are difference.

- Website www.kohsantepheapdaily.com.kh (Cambodia):

- Website www.sabay.com.kh (Cambodia) has two path and chooses NO DNSSEC path:

Example 6:

This is an example of two path. One uses DNSSEC all the path and the second partially. Website www.bancoestado.cl (Chile) chooses the second path:
